TOOLS & SOFTWARE

EASYSCAN

The first application developed by Olivetti to optimise the scan functions of the d-Copia and d-Color multifunctional digital devices and cut running costs.

OLIVETTI SOFTWARE SOLUTIONS

FUNCTIONS

QUICK INSTALLATION

EasyScan is a web-based software application, for installation on the Company network server only. This cuts installation time to a minimum, since there is no need to repeat the procedure on every PC on the network.

Installation is completed with the activation of a software connector, resident on the MFP, to enable access to EasyScan (resident on the server only) from the touch-screen panel.

ACCESS FROM THE PC

EasyScan offers users, connected to the company network, the possibility to create scan profiles easily from their PC.

To access EasyScan, the PC user simply keys in the URL in their internet browser and clicks on the link, just as easily as accessing sites from their list of favourites.

CONFIDENTIAL SECURE OPERATION

Once the user has reached EasyScan, they access the application by authenticating their user name and network password.

The authentication procedure ensures secure, confidential access for each user to their own list of scan profiles, which cannot be accessed by any other user.

FULL RANGE OF SCAN PARAMETERS

Scan profiles are created with a series of parameters:

- the scan mode for the original (b/w or colour, one or both sides of the page, resolution, sharpness, file format, quality, etc.)
- attribution of the filename
- definition of the file path (manual, on a network folder, as an e-mail attachment)
- attribution of the name of the scan profile, for subsequent identification and retrieval via the MFP panel

ACCESS FROM THE MFP

EasyScan start-up from touch-screen panel is possible through a dedicated icon. After the log-in procedure the access to the user's profiles is immediate, to ensure rapid scanning of originals and limit wait time for other users.

ADVANTAGES

- Easy intuitive use
- Same user interface on PC and MFP
- Reduced user time on MFP
- Optimisation of running costs
- Maximum confidentiality and security for users
- Integration with networks based on Windows Active Directory®
- Limited installation time

TECHNICAL CHARACTERISTICS

Compatibility with Windows® Server 2003 and Server 2008	Application start-up from PC via browser
Windows Active Directory® network requirement	User authentication with username and network password
MFP compatibility (list on www.olivetti.com)	Application start-up from MFP with dedicated icon
Application installation on network server only	3 file send modes
